

JADARA AL-ALDAA CONSULTING

جدارة الأداء الاستشارية

Website Development Brief — v2.0

Includes Brand Identity Details from Ulike Branding Team

Version 2.0 | Confidential

BRAND IDENTITY — JADARA (جدارة)

BRAND IDENTITY REFERENCE

The branding for Jadara Al-Aldaa Consulting was created by the Ulike team. This section gives the developer everything they need to stay perfectly on-brand throughout the website. Read this section before writing a single line of CSS.

Company Identity

Full name (English): JADARA AL-ALDAA CONSULTING

Full name (Arabic): جدارة الأداء الاستشارية

Short name used in logo: JADARA / جدارة

Tagline concept from branding: "جدارة الأداء الاستشارية" — Performance Excellence Consulting

What the brand stands for:

The Jadara identity is built on the concept of gradual, methodical ascent — growing step by step, level by level. The brand philosophy is rooted in trust, professionalism, and structured progress. This is not a 'disruptive startup' brand. It is a measured, authoritative, intelligent consulting identity.

Logo

The logo consists of two elements used together:

- The Arabic word جدارة (Jadara) — set in a clean, geometric Arabic typeface
- An icon of 3 ascending vertical bars of varying heights — referencing the letter J and symbolizing step-by-step growth and performance elevation

Two logo variants exist in the branding:

- Arabic version: جدارة + bar icon + subtitle 'جدارة الأداء الاستشارية'

- English version: JADARA + bar icon + subtitle 'JADARA AL-ALDAA CONSULTING'

✍ The website likely needs both variants. Use the Arabic version as the primary logo (this is a Saudi consulting company). The English version can appear as an alternate in the footer or bilingual version.

PLACEHOLDER: LOGO FILES — Request SVG files (both Arabic and English variants) from the branding designer. You need: primary color version, white/inverted version (for dark backgrounds). The bar icon alone as a standalone SVG is also useful as a favicon source.

Brand Color Palette

The following colors are extracted directly from the Jadara branding PDF. These are the **ONLY** colors the developer should use. Do not introduce new colors.

Primary Colors:

 Jadara Navy #1C2B3A Logo, headers, dark sections, primary text on light bg	 Steel Blue #B8CDD9 Backgrounds, secondary elements, light cards, motif pattern	 White #FFFFFF Content backgrounds, text on dark backgrounds	 Near Black #1A1A1A Body text on white backgrounds
---	---	---	--

Derived / UI Colors (approved extensions of the palette):

 Interactive Blue #2A5F8F Links, hover states, CTA button background	 Light Steel Tint #D6E4EC Hover backgrounds on cards, very light section bg	 Deep Navy #0F1E2B Footer background, contact section background	 Off-White #F4F7F9 Alternating section background (instead of pure white)
--	---	---	---

CSS Variables — copy this into your :root stylesheet:

```
:root {
  --color-primary:      #1C2B3A;    /* Jadara Navy */
  --color-secondary:    #B8CDD9;    /* Steel Blue */
  --color-accent:       #2A5F8F;    /* Interactive Blue */
  --color-bg:           #FFFFFF;     /* Main background */
  --color-bg-alt:       #F4F7F9;    /* Alternating section bg */
  --color-bg-dark:      #0F1E2B;    /* Footer / contact section */
  --color-text:         #1A1A1A;    /* Primary text */
  --color-text-light:   #FFFFFF;     /* Text on dark sections */
  --color-text-muted:   #555555;    /* Secondary/muted text */
  --color-steel:        #B8CDD9;    /* Pattern & decoration */
  --color-steel-light:  #D6E4EC;    /* Card hover state */
}
```

Brand Pattern & Motif

The Jadara brand has a distinct visual motif: graduated vertical stripes/bars that vary in height — directly referencing the ascending bar logo. This pattern appears prominently on:

- Binder covers and stationery (alternating navy and steel blue vertical bars)

- Envelope designs
- Dark-background promotional materials

On the website, this pattern should be used subtly in:

- Hero section — as a very low-opacity background texture or a decorative element on one side
- Section dividers — a small strip of the ascending bar pattern between major sections
- Footer — the motif pattern as a background element at low opacity
- Contact section — as a decorative side panel

✎ *Do NOT overuse the pattern. It is a brand accent, not a wallpaper. Use it at 8–15% opacity when placed over content, or full opacity only on purely decorative elements with no text on top.*

Implementation: The pattern can be recreated in pure CSS using repeating gradients, or as a lightweight SVG. No image file needed.

```
/* CSS: Jadara bar pattern as background */
.jadara-pattern {
  background: repeating-linear-gradient(
    90deg,
    #1C2B3A 0px, #1C2B3A 24px,
    #B8CDD9 24px, #B8CDD9 40px
  );
}
```

Typography for Jadara

The branding uses clean, geometric Arabic and Latin typefaces consistent with a serious consulting identity. The developer must use a font that supports BOTH Arabic and Latin scripts perfectly.

Recommended Font Pair (Arabic + English bilingual)

- IBM Plex Sans Arabic — supports Arabic and Latin, clean geometric, professional. Free on Google Fonts.
- Alternative: Cairo — widely used, very clean, supports both scripts. Free on Google Fonts.
- Alternative: Tajawal — slightly more modern feel. Free on Google Fonts.

✎ *Avoid decorative or calligraphic Arabic fonts. The Jadara brand is built on geometric precision — the font must match this principle. Think 'architectural', not 'ornamental'.*

Font Weights to Load

- 400 — body text
- 600 — card titles, nav links, labels
- 700 — section headlines
- Do not load 300 (too light for consulting) or 800+ (too aggressive)

Brand Personality in Design Decisions

Every design decision on the website should pass this filter — ask: 'Does this match Jadara's identity?'

☑ JADARA DOES THIS	✗ JADARA NEVER DOES THIS
Clean, geometric shapes and spacing	Rounded, bubble-style UI elements
Navy + Steel Blue + White color discipline	Bright colors, gradients, neon accents
Subtle, purposeful animations (Lottie outline icons)	Flashy, party-style animations and transitions
Vertical bar motif used as a brand texture	Random or unrelated decorative patterns
Confident, minimal typography — let the space breathe	Dense, cluttered layouts with too many elements

SECTION 1 — PROJECT OVERVIEW

1. Project Overview

This document is a complete website development brief for Jadara Al-Aldaa Consulting's brand-new brochure website. The website is a single-page (or multi-section single-scroll) experience that introduces the company, showcases their services, displays their clients, and invites visitors to get in touch.

1.1 Reference Websites

Primary Style Reference — u-like.net

URL: <https://u-like.net/> — Note: this website was also created by the Ulike team (the same team who designed Jadara's brand). Study it carefully.

Key elements to borrow from u-like.net:

- Animated Lottie icons for services — play on hover. This is a must-have.
- Smooth scroll-in animations — elements fade/slide as user scrolls down.
- Client logos in a clean animated horizontal strip.
- Contact form that is minimal and inviting — 5 fields max.
- Section flow: Hero → Services → About → Clients → Testimonials → Contact.

Formal Tone Reference — strategicgears.com

URL: <https://www.strategicgears.com/> — Represents the upper bound of formality.

This site is too stiff for Jadara, but its structural seriousness is a good reference. Target tone: professional enough for corporate clients, human enough for SMEs and startups.

🔗 The final website sits exactly between these two references. u-like.net gives us creativity and animation. strategicgears.com gives us gravitas and structure. Jadara's brand gives us the color discipline to tie it all together.

1.2 What to Absolutely Avoid

- Generic stock photos — especially handshakes, laptops, and boardroom meetings.
- Flat blue/white corporate color blocks with zero personality.
- Clip-art style service icons — Lottie animated outline icons only.
- Cookie-cutter hero sections with centered 'We help you grow' text.
- Section titles like 'Our Services', 'About Us', 'Contact Us' — reframe them creatively.
- Anything that could belong to ANY consulting company — the design must feel uniquely Jadara.

SECTION 2 — WEBSITE STRUCTURE & SECTIONS

2. Website Structure

Single-page scroll site with sticky navigation. All sections flow vertically. The website must support both Arabic (RTL) and English (LTR) — or at minimum, display the company name and key elements correctly in Arabic alongside English content. Confirm language requirements with the client.

2.1 Navigation Bar

Sticky top navigation. Transparent over the hero, then solid dark navy (with frosted glass backdrop-filter) on scroll.

- **Left/Right:** Logo (Arabic variant as primary) on the right side (Arabic convention — RTL)
- **Links:** Navigation anchor links: Services, About, Clients, Contact
- **CTA:** CTA button: 'تواصل معنا' / 'Start a Project' — navy background, white text, subtle hover lift

■ **PLACEHOLDER: LOGO FILE — SVG of the Jadara logo. Arabic version is primary.**
Request from branding designer.

2.2 Hero Section

Full viewport height (100vh). Bold. Stops the user from scrolling away in 3 seconds.

Design Direction

Given Jadara's brand, the hero should use a dark navy background (#1C2B3A) with the vertical bar motif pattern as a subtle texture on one side (right side, 20% opacity). The headline text is white. The effect should feel like walking into a serious, premium consulting firm's lobby.

- **Headline:** Large, bold, white on navy. 64–72px. Ask client for the actual tagline.
- **Supporting line:** 1 sentence, ~20 words, steel blue or light gray text.
- **Two CTAs side by side:** Primary ('ابدأ مشروعك' / 'Start Your Project') in steel blue, Secondary ('اكتشف خدماتنا' / 'Our Services') as an outlined button.

- Animated element: The logo icon (3 ascending bars) can animate in — bars rising one by one on page load. This is uniquely on-brand.
- Scroll indicator at bottom: animated downward chevron in steel blue.

■ **PLACEHOLDER: HERO LOTTIE** — A geometric/abstract animation in navy and steel blue tones. Or animate the logo bars rising — this is the most on-brand option. Lottie search: 'bar chart growth', 'ascending', 'data rise'. Match the color to brand palette.

2.3 Stats Bar

A thin strip just below the hero — high contrast. 3–4 animated counters that count up when entering the viewport.

- Background: Steel Blue (#B8CDD9) or Navy (#1C2B3A). The pattern motif can appear here at low opacity.

■ **PLACEHOLDER: STATS** — Real numbers from the client: clients served, years of experience, projects completed, industries covered.

2.4 Services Section

Core section. Animated Lottie icon cards, 3-column grid.

Design Direction

Card style: White background, thin 1px steel blue border, slight box shadow. On hover: border becomes navy, card lifts slightly, Lottie icon plays. Lottie icons must be in the 'Outline' or 'Stroke' style on LottieFiles — avoid colorful cartoon icons entirely.

■ **PLACEHOLDER: SERVICE LOTTIE ICONS** — One .json file per service, Outline/Stroke style. Download from LottieFiles.com. Suggested searches per service: 'strategy outline', 'analytics stroke', 'performance growth', 'consulting outline', 'management', 'organizational'. Replace with actual services from the client.

■ **PLACEHOLDER: SERVICE 1** — [Name] + description + lottie icon

■ **PLACEHOLDER: SERVICE 2** — [Name] + description + lottie icon

■ **PLACEHOLDER: SERVICE 3** — [Name] + description + lottie icon

■ **PLACEHOLDER: SERVICE 4** — [Name] + description + lottie icon

■ **PLACEHOLDER: SERVICE 5** — [Name] + description + lottie icon

■ **PLACEHOLDER: SERVICE 6** — [Name] + description + lottie icon

2.5 About / Who We Are

Split layout: left = decorative element (Lottie or brand pattern illustration), right = text content.

Background: Off-white (#F4F7F9) — creates a gentle rhythm break from the white service section.

Content

The branding document describes Jadara as: a structured, methodical consulting firm that elevates organizations and individuals through knowledge-accumulation-based solutions and sustained progress. This should be reflected in the writing tone — not casual, but also not cold.

- **PLACEHOLDER: ABOUT LOTTIE** — A network/growth/ascent animation in navy colors. Suggested: 'growth steps', 'network consulting', 'organizational structure'. Keep it minimal.
- **PLACEHOLDER: ABOUT TEXT** — Company description, 3 core values/principles, main differentiator from competitors.

2.6 How We Work (Process)

3–5 step horizontal process strip. Background: dark navy (#1C2B3A) — creates a strong visual break. Text is white/steel blue. The vertical bar motif can be used as a background texture here.

- **PLACEHOLDER: PROCESS ICONS** — Small Lottie or SVG icons per step. Outline style.
- **PLACEHOLDER: PROCESS STEPS** — Actual methodology steps from the client (e.g.: Discovery → Assessment → Strategy → Implementation → Review).

2.7 Clients Section

Infinite marquee of client logos. All logos grayscale by default → full color on hover. Elegant and minimal.

✍ Given Jadara is a new company, even 3–4 client logos is enough to activate this section. Quality over quantity. If no logos available yet, use a text-based 'trusted by' section instead.

- **PLACEHOLDER: CLIENT LOGOS** — SVG or high-res PNG. Should be grayscale-compatible. Minimum 3 logos.

2.8 Testimonials

Swiper.js carousel. Card style matches the service cards (white, 1px steel border). Large decorative quotation mark in steel blue. Client name, role, company below each quote.

- **PLACEHOLDER: TESTIMONIAL CONTENT** — Real quotes. Name, role, company. Minimum 3.

2.9 Contact / Get in Touch

Dark section: deep navy background (#0F1E2B) with the vertical bar motif at low opacity on the right side. This creates a powerful, premium feel — and draws the eye after the light content above.

Form Design

The form must feel like an invitation, not a bureaucratic task. Big warm headline, generous field padding, a full-width prominent submit button in Steel Blue with navy text.

- Full Name / الاسم الكامل

- Company / الشركة (optional label if they're an individual)
- Email / البريد الإلكتروني
- Phone / رقم التواصل
- Tell us about your project / نبذة عن المشروع (textarea, 3 rows)
- Submit: 'أرسل طلبك' / 'Send My Request →'

Below the Form

Show WhatsApp button, clickable email, and city/country. These are alternatives for people who don't like forms.

- **PLACEHOLDER: CONTACT DETAILS** — WhatsApp number (with +966 country code), email address, city.
- **PLACEHOLDER: FORM SUCCESS LOTTIE** — Checkmark or 'sent' animation in navy/steel blue. LottieFiles search: 'success check outline', 'email sent'.

2.10 Footer

Dark navy background. Logo (white version). One-line tagline. Navigation links. Social media icons. Copyright. The bar motif pattern appears here at 10% opacity as texture.

- **PLACEHOLDER: SOCIAL MEDIA LINKS** — LinkedIn, Twitter/X, and any other platforms the company uses.

SECTION 3 — TECHNICAL SPECIFICATIONS

3. Technical Specifications

3.1 Tech Stack

- HTML5 / CSS3 with CSS custom properties (the brand variables defined above)
- Vanilla JavaScript — no heavy framework needed for a brochure site
- Lottie Web — for animated icons
- AOS or GSAP ScrollTrigger — for scroll animations
- Swiper.js — for testimonials carousel
- CountUp.js — for stats counter animation
- CSS-only infinite marquee — for client logos strip
- Web3Forms or Formspree — zero-backend form submission (sends to email)

3.2 RTL / Bilingual Considerations

Confirm with client: Is the website Arabic-only, English-only, or bilingual (with a language toggle)?

- If bilingual: use `dir='rtl'` on the html tag for Arabic, `dir='ltr'` for English. CSS logical properties (`margin-inline-start` etc.) make RTL support much easier than using left/right properties.
- If Arabic-only: the entire layout is RTL. The navigation logo goes on the right, text aligns right, the process steps flow right to left.
- Font: IBM Plex Sans Arabic handles both scripts in a single font load.

🔗 *Do not launch without testing the Arabic layout on a real mobile device. Arabic text rendering varies between iOS and Android.*

3.3 Performance

- Lighthouse target: 90+ Performance, 100 Accessibility
- All images: WebP format, compressed, lazy loading
- Lottie files: SVG renderer, each .json under 200KB
- Font loading: `font-display: swap`
- Respect `prefers-reduced-motion` for all animations

3.4 Responsive Breakpoints

- Mobile: 320px–767px
- Tablet: 768px–1023px
- Desktop: 1024px–1440px
- Wide: 1440px+ (max content width 1200px, centered)

3.5 SEO & Meta

- Semantic HTML: `<header>`, `<main>`, `<section>`, `<footer>`
- Every image: descriptive alt text (in Arabic if Arabic site)
- Meta title and description — get from client
- Open Graph tags for WhatsApp/LinkedIn sharing (`og:image` should be 1200x630px)
- `lang` attribute on `<html>` tag — `'ar'` for Arabic, `'en'` for English

3.6 Deployment

- Vercel (recommended) — free, automatic HTTPS, excellent performance
- Netlify — free tier, built-in form handling option
- Confirm domain/hosting with client before starting

SECTION 4 — CONTENT & ASSETS CHECKLIST

4. Content & Assets Checklist

4.1 Content from Client

1. Company tagline / hero headline — max 8 words (Arabic and/or English)
2. Company description — 2–3 sentences about who Jadara is
3. 3 core values or principles — name + 1-sentence description each
4. Full list of services — name + 2–3 sentence description per service
5. Working methodology / process steps — 3–5 steps
6. Statistics: clients served, years in operation, projects completed, industries
7. Testimonials — minimum 3 quotes with name, role, company
8. Contact details: WhatsApp (+966...), email, city
9. Social media profile URLs
10. Meta title and description for SEO
11. Language decision: Arabic only / English only / bilingual with toggle

4.2 Visual Assets from Client / Designer

12. Logo SVG files — Arabic variant (primary) + English variant + white/inverted versions
13. Brand colors confirmed (use hex values in this document as reference)
14. Client logos — SVG or high-res PNG, minimum 3
15. Team photo or headshots (optional)
16. Full branding PDF from Ulike team (provided — the document you have)

4.3 Lottie Icons to Download

All from LottieFiles.com — use the 'Stroke' or 'Outline' category. Navy/dark palette preferred.

- 1 hero background animation (geometric/ascending bars theme)
- 1 icon per service (6 services = 6 files)
- 1 about section illustration
- 3–5 process step icons
- 1 form success animation

Total: ~12–15 files. Test each file — reject anything cartoonish or colorful.

SECTION 5 — DIRECT INSTRUCTIONS TO THE DEVELOPER

5. Direct Instructions to the Developer

5.1 The Jadara Anti-Generic Checklist

Before submitting any work, answer these questions. If any answer is 'yes', rework that element:

- Could this hero section belong to any other consulting company? → It must only feel like Jadara.

- Are there any colors outside the brand palette on the page? → Remove them.
- Are the service icons colorful or cartoonish? → Replace with outline/stroke Lottie icons.
- Does the vertical bar motif appear nowhere on the page? → Add it in at least 2 spots, subtly.
- Is there a stock photo of a person in a suit anywhere? → Delete it.
- Does the typography feel casual or playful? → Tighten it. Jadara is precise and confident.
- Is the dark contact section forgettable? → It should be the most visually dramatic moment on the page.

5.2 Hero Animation Idea (On-Brand)

The most on-brand hero animation for Jadara is to animate the logo mark — the 3 ascending bars — rising up one by one on page load. This is easy to do in CSS or GSAP and requires no external Lottie file. Each bar starts at height 0 and rises to its full height with a staggered delay. It makes the very first thing the user sees tell the brand story.

5.3 Form Implementation

Use Web3Forms (<https://web3forms.com/>) or Formspree. Submit handler in JS — no page reload. Show spinner on submit, then Lottie success animation on completion. Validate: required fields, email format, textarea minimum length.

5.4 Pattern Motif Implementation

The vertical bar pattern can be CSS-only. Use the repeating-linear-gradient code provided in the Brand Colors section above. For the 'stepped/graduated height' version (more true to the brand), use an inline SVG with 3–5 rectangles of varying heights, repeated as a background-image.

5.5 Mobile-First

Build at 375px first. The Arabic layout on mobile is the hardest part — test it early and often. On mobile, the hero pattern motif should be hidden or reduced to maintain readability.

5.6 Deliverables

- Fully responsive website (mobile, tablet, desktop) — RTL-correct
- Source code (GitHub repo or zip) — clean, commented
- Deployed staging URL for client review
- 3–5 minute screen recording walkthrough for client presentation
- Two review rounds before final handoff
